Crohn’s Disease (with medication exposure)

Help Us Understand the Effects of Crohn’s Disease in Pregnancy

Many people need to take medication during pregnancy to appropriately manage their Crohn’s disease. Yet fewer than 10% of medications have enough information to determine their safety for use in pregnancy — this is where we need you as our partner!

> *“There is a huge need to generate more info for all of the drugs that people who are pregnant need to take.”*
>
> *--- Christina Chambers, PhD, MPH, Lead Investigator, MotherToBaby Pregnancy Studies*

Do you have Crohn’s disease with exposure to Tremfya® (guselkumab)? Are you currently pregnant? If you answered “yes” to both of these questions, you may be able to help us advance our knowledge of how Crohn’s disease and its management can affect a pregnancy and a developing baby.

Will you take the step and become our partner? Make an impact on the health of future families today by joining our Pregnancy Study!

Arthritis Pregnancy Study

Are you pregnant and living with arthritis or another inflammatory or rheumatic condition? You can help advance critical research by joining our Arthritis Pregnancy Study.

You may qualify if you are:

- Pregnant, planning a pregnancy, or recently pregnant
- Living with psoriatic arthritis, lupus, hidradenitis suppurativa, ankylosing spondylitis, or non-radiographic axial spondyloarthritis
- Taking medication or not taking medication

What is involved

- Phone interviews and online questionnaires
- Medical record review for mom and baby
- Optional virtual baby exam with a study doctor

Why Participate?

- Help future moms and families
- Advance research on arthritis and pregnancy
- Share your experience
- Secure and confidential
