MotherToBaby Launches First Lupus in Pregnancy Study

World-Renowned UC San Diego Epidemiologist Leads Groundbreaking Study

SAN DIEGO, CA – Recruitment is underway for a groundbreaking new study on the treatment of lupus during pregnancy. The observational research, led by world-renowned UC San Diego epidemiologist Christina Chambers, PhD, MPH, is the first of its kind for the non-profit MotherToBaby, a CDC-recommended organization that provides evidence-based information on medications, diseases, vaccines, herbal supplements and more during pregnancy and breastfeeding.

The study will recruit 400 pregnant people over a five-year period to evaluate use of the lupus drug Benlysta® (belimumab) in pregnancy. Benlysta® is used to treat the most common type of lupus, systemic lupus erythematosus (SLE), as well as lupus nephritis. Currently, there is limited information on the drug's use in pregnancy.

The study will be MotherToBaby's first to focus on a treatment specifically for lupus, and participants will be enrolled into the MotherToBaby Pregnancy Studies research program. Chambers, who is the lead investigator for MotherToBaby Pregnancy Studies, Co-Director of the Center for Better Beginnings, and Chief of the Environmental Science and Health Division in the UC San Diego Department of Pediatrics, noted that, "lupus can raise the risk of pregnancy complications, so it's important for both the mom and her developing baby that this condition be well-managed during pregnancy. So, when treatments for lupus like belimumab are available, we want to do our best to gather information about those pregnancies where this medication has been used."

The study is enrolling pregnant and recently pregnant people with exposure to Benlysta® and will provide critical information on the use of this medication during pregnancy. Participants will not be asked to change any part of their health care routine, including medications, nor will they be asked to travel.

More about MotherToBaby Pregnancy Studies

MotherToBaby Pregnancy Studies are conducted by the non-profit Organization of Teratology Information Specialists (OTIS) and coordinated at the Center for Better Beginnings at UC San Diego. OTIS is a professional scientific society made up of individuals engaged in assessing and evaluating risks to pregnancy and breastfeeding from environmental exposures. Members include, but are not limited to, specialists in the fields of obstetrics and gynecology, pediatrics, genetics, dysmorphology, perinatal epidemiology, teratology, behavioral teratology, pharmacy, genetic counseling, nursing, midwifery, maternal and child health, public health, and include experts that provide MotherToBaby services and researchers that conduct MotherToBaby Pregnancy Studies.

MotherToBaby is a suggested resource by many federal agencies including the Centers for Disease Control and Prevention (CDC). MotherToBaby is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) as part of an award totaling $6,000,000 with zero percentage financed with non-governmental sources. The contents of this release are those of the author(s) and do not necessarily represent the official views of, nor an endorsement, by HRSA, HHS or the U.S. Government. MotherToBaby Launches First Lupus in Pregnancy Study

March 23, 2020

LA JOLLA, CA –A new study conducted by birth defects research experts from the non-profit Organization of Teratology Information Specialists (OTIS) launches to examine the short and long-term effects of the novel COVID-19 virus in pregnancy and breastfeeding. The observational study will consist of phone calls over the course of volunteers' pregnancies and post-delivery, and/or breastmilk samples, as well as a release of medical records related to the pregnancy and the infant's development.

OTIS is the scientific non-profit society that provides the no-cost MotherToBaby information service and enrolls women through the MotherToBaby Pregnancy Studies.

“Women and their health care providers need answers as quickly as possible regarding the effects of COVID-19 during pregnancy and while breastfeeding,” said the Principal Investigator, Christina Chambers, PhD, MPH, OTIS/MotherToBaby president and professor of pediatrics at UC San Diego (pictured right). “We know that pregnant and breastfeeding moms are contracting COVID-19, but the fact of the matter is that we know very little about its short and long-term effects on a developing baby,” she added. “We hope pregnant women see the importance in helping the world understand this novel virus and consider volunteering for the study.”

The study is open to pregnant and breastfeeding women in the United States and Canada with known or suspected COVID-19 infection. The MotherToBaby Pregnancy Studies Research Center is located at the University of California San Diego.

Pregnant women and breastfeeding mothers can enroll in the study at the following link https://mothertobaby.org/join-study/ or by calling MotherToBaby Pregnancy Studies at (877) 311-8972. Learn more about the ongoing observational study at https://mothertobaby.org/ongoing-study/coronavirus-covid-19/.

Health care providers can refer pregnant and breastfeeding patients with known or suspected COVID-19 infection at the following link https://mothertobaby.org/healthcare-professional-referral-form/ or by calling MotherToBaby Pregnancy Studies at (877) 311-8972.
