

Help Moms with Lupus

Volunteer for Research to Improve the Health of Moms and Babies

MotherToBaby is currently enrolling pregnant women in an observational study examining how systemic lupus erythematosus (or SLE, a type of lupus) or active lupus nephritis (lupus-related kidney inflammation) and its treatment affect pregnancy. All studies are conducted through phone interviews - no changes to your normal routine or travel required. If you've taken Benlysta (belimumab) and are pregnant, you may qualify for this important study.

"There is a huge need to generate more data for all of the drugs that pregnant women need to take."

— Christina Chambers, PhD, MPH, MotherToBaby Pregnancy Studies

MotherToBaby is the most trusted information source for medication safety in pregnancy.

Make an impact on lupus research by enrolling into our pregnancy study!
