

Do You Have Eczema (Atopic Dermatitis)?

Volunteer for a pregnancy study from the comfort of your home.

MotherToBaby is currently enrolling pregnant women in an observational study to learn more about eczema/atopic dermatitis and its treatment during pregnancy. We're seeking two groups of participants. If you belong to either of these groups, you could qualify to join us:

- Women who have taken DUPIXENT® (dupilumab) during pregnancy.
- Women who have eczema/atopic dermatitis and have not taken this medication during pregnancy.

If you join our study, our team will observe your pregnancy and your baby's development for a period of time after birth. **Our research is by observation only—we will not ask you to take or change any medications. Plus, you can participate from the comfort of your home.**

All of our studies include:

- 1-3 phone interviews during your pregnancy and at least 1 interview after you have your baby. Some studies may have additional interviews.
- Your permission to obtain a copy of your and your baby's medical records from your healthcare providers.

"Help us improve the ability for pregnant women and their health provider to make safe treatment decisions by joining our pregnancy study!"

— Christina Chambers, PhD, MPH, MotherToBaby Pregnancy Studies
