

NEW COVID-19 AND PREGNANCY STUDY

REFER YOUR PATIENTS TODAY

We know that pregnant women are contracting **COVID-19**, but the fact of the matter is that we know very little about its effects on pregnancy, fetal and infant outcomes. Our new observational study will provide this much-needed information.

If you have a patient who has been exposed to or diagnosed with COVID-19 in a current or recent pregnancy, **please refer her to our observational research study.**

WHO CAN PARTICIPATE?

Women in the United States and Canada with known or suspected COVID-19 infection at any point during a current or recent pregnancy or within 30 days of the last menstrual period before conception.

WHAT IS INVOLVED?

- Participants self enroll 
- 1-3 phone calls over the course of the pregnancy and post-delivery,
- Release of medical records related to the pregnancy and the infant's development.

HOW CAN I REFER?
