Your Trusted Partner in Identifying the Safest Treatment Options during Pregnancy

Information & Research

A huge part of MotherToBaby is observational research. To do this we depend on women sharing their experience. We put it all together and disseminate the information to health care providers and their patients so that together they can make evidence-based decisions about the best treatment in pregnancy.

Professor, University of California San Diego School of Medicine
Principal investigator, motherToBaby Pregnancy Studies

MotherToBaby App

MotherToBaby is the nation’s most trusted resource for information and research about pregnancy exposures.

Information and Education

Resources for you & your patients

MotherToBaby provides FREE evidence-based information on the safety of medications and other exposures during pregnancy and breastfeeding.

We can help with questions regarding:
- Prescription & OTC medications
- Infections & vaccines
- Maternal medical conditions
- Chemical exposures
- Vitamins & supplements
- Alcohol & recreational drugs
- and more...

MotherToBaby is a suggested resource by the CDC and the FDA Office of Women’s Health

Obstetrical Pregnancy Studies

Help us find answers to how medications affect pregnancy

PATIENT PARTICIPATION INVOLVES
- One to four phone interviews during pregnancy with at least one interview after delivery
- Releasing medical records for their pregnancy and for their baby up to 5 years of age
- May involve a free specialized pediatric exam and neurodevelopmental testing for their child
- No travel or changes to medication use or healthcare routine

Critical periods of your baby’s development

**WHAT ARE STRUCTURAL BIRTH DEFECTS?**
Structural birth defects are abnormalities in the structure of body parts. Examples include cleft palate, heart defects and spina bifida.

**WHAT ARE FUNCTIONAL BIRTH DEFECTS?**
Functional birth defects are problems in how a body system works. Examples include hearing and vision loss.

**WHAT CAUSES BIRTH DEFECTS?**
Birth defects can be caused by genetic (mutations) or environmental factors (teratogens). Examples of teratogens include alcohol, certain medications, and infections.

This chart shows the most sensitive times of a baby’s development during the 38 weeks of pregnancy*
